PROFILE

Born on the French west coast, my childhood connection to the ocean fueled my dedication to marine environments. During my bachelor's degree, I had the opportunity to visit reef island ecosystems, where I sadly witnessed their vulnerability to climate change. In this context, I decided to pursue a Ph.D. on coastal protection in French Polynesia, focusing on benthic functionality and communities. My main interest lies into quantifying the shifts in ecosystem functioning due to global change, though a combination of fieldwork, experiments, and advanced statistical modelling across multiple spatial scales. In addition to my research pursuits, I also enjoy data analysis and visualization, aiming to communicate complex findings in clear and accessible ways.
